Data & Analytics Engineer at a global automotive manufacturer. I own the path from raw operational data to the products people use: Python pipelines orchestrated with Prefect, tested Snowflake and dbt models, Power BI and Streamlit on top, running on AWS. Used across 20+ plants in North America, APAC and EMEA, from top management to the shop floor.

EXPERIENCE

Data & Analytics Engineer Jan 2025 – Present
RESRG Automotive · global automotive manufacturer Liria, Spain (hybrid)

- Replaced plant-level Excel trackers with a governed analytics layer on Snowflake and dbt, now the shared source for **20+ plants** across three regions, from executive reporting to the shop floor.
- Standardised **130+ KPIs** and their targets through a Streamlit governance app, with dbt tests on every write-back to Snowflake, so every plant reports the same metric the same way.
- Built and orchestrated Python ETL with Prefect from REST APIs, email and operational systems, including near-real-time inventory data; made stock loading **~90% faster** at **~30% lower cost**, mostly by cutting idle time.
- Delivered Power BI dashboards and Streamlit apps for operations, finance and HR, designing the Snowflake models behind them and tuning queries and views for performance.
- Deployed the apps to production on AWS (EC2, S3, EFS) with Docker, CI/CD and Prometheus monitoring.
- Forecast plant energy consumption from production variables for purchasing, normalised against sales.

Data Scientist (internship) Nov 2023 – Jul 2024
Biomedical Data Science Lab, ITACA, UPV Valencia, Spain

- Built a Python framework to audit healthcare ML models against **Trustworthy AI** principles: fairness, robustness and explainability (SHAP), the basis of my BSc thesis.

PROJECTS

Job Market Intelligence · [case study](#) · [github.com/carlosdmv7/job-market-intelligence](#)
Reads EU data-job ads every day and ranks them against a CV: six free APIs, LLM enrichment that went from **23 to 180** ads a day on the same free quota, dbt on MotherDuck, Prefect Cloud, GitHub Actions CI and Streamlit.

Spanish Housing Radar · [case study](#) · [github.com/carlosdmv7/spanish-housing-radar](#)
Finds under-priced flats in València by scoring every listing against its neighbourhood: weekly scraping, dbt with **162** data tests, Prefect Cloud, Docker, GitHub Actions CI and Streamlit.

SKILLS

Data modelling & warehousing	Snowflake, dbt, DuckDB, dimensional modelling (Kimball)
Languages & integration	Python, SQL, Bash, Jinja, DAX, REST APIs
Orchestration & cloud	Prefect, Airflow, AWS (EC2, S3, EFS), Docker
CI/CD & quality	GitHub Actions, Azure DevOps, Git, Make, pytest, Pydantic, ruff, mypy
BI, apps & observability	Power BI, Streamlit, Microsoft Fabric, Prometheus
AI & ML	LLM APIs (Azure OpenAI, Gemini), LLM evaluation, scikit-learn, SHAP

EDUCATION

MSc, Data Analysis, Process Improvement & Decision Support Engineering · UPV, Valencia
BSc, Biomedical Engineering (ICT specialisation) · UPV, Valencia
Thesis: a Trustworthy AI framework for healthcare, graded 10/10 · top 25% of the year

LANGUAGES

Spanish (native) · English (C1, Cambridge, 194)
