I turn manual, spreadsheet-run processes into data products people use every day — at a global automotive manufacturer, for top management and the shop floor alike, across purchasing, finance, supply chain and production in 20+ plants. I sit with the people who run a process, agree what each number means, and only then build the model and the app behind it.

### EXPERIENCE

**Data & Analytics Engineer** (official title: Digital Transformation Specialist) Jan 2025 – Present  
RESRG Automotive · global automotive manufacturer Liria, Spain (hybrid)

- Replaced manual Excel trackers across **20+ plants** (NA, APAC, EMEA) with self-serve data products in Streamlit and Power BI — from the executive summary **200+ people** open daily to inventory apps on the shop floor, across purchasing, finance, supply chain and production.
- Set one definition for **130+ operational KPIs** through a KPI-governance app built on dbt, with tests on every model and pipeline observability in Prometheus.
- Forecast plant electricity consumption from production variables for the purchasing team, joining utility invoices with production and financial data so usage normalises against sales.
- Re-engineered the end-to-end refresh with CI/CD, cutting runtime **~98%** and compute cost **~90%**.
- Built near-real-time analytical models for a warehouse management system over **800M+ rows** in Snowflake, refreshed by event-driven Prefect flows that fire when upstream Fivetran HVR replication lands, with the data engineering team.

**Data Scientist (internship)** Nov 2023 – Jul 2024  
Biomedical Data Science Lab, ITACA — UPV Valencia, Spain

- Built an end-to-end Python framework and preprocessing pipelines to evaluate healthcare ML models for fairness, robustness and explainability (XAI).

### PROJECTS

**Job Market Intelligence** · [case study](#) · [github.com/carlosdmv7/job-market-intelligence](https://github.com/carlosdmv7/job-market-intelligence)  
Daily pipeline reading EU data-job postings from six free APIs; LLM enrichment batched to read **23 → 180** postings a day on the same free quota; dbt medallion on MotherDuck (9 models, 53 tests); Streamlit app ranking roles against a CV. Prefect Cloud deployment, €0 a month.

**Spanish Housing Radar** · [case study](#) · [github.com/carlosdmv7/spanish-housing-radar](https://github.com/carlosdmv7/spanish-housing-radar)  
Weekly scrape of València listings, each scored against an empirical-Bayes blend of its barrio and district benchmark; dbt medallion (19 models, 162 tests), Prefect Cloud, Docker, Streamlit.

### SKILLS

|                          |                                                                                |
|--------------------------|--------------------------------------------------------------------------------|
| BI & data apps           | Power BI, Streamlit, Microsoft Fabric                                          |
| Warehouse & modelling    | Snowflake, dbt, DuckDB, Kimball dimensional modelling                          |
| Languages                | Python, SQL, Jinja, DAX                                                        |
| Platform & orchestration | AWS, Prefect, Airflow, GitHub Actions (CI/CD), Git, Azure DevOps, Docker, Make |
| Quality & observability  | dbt tests, pytest, Pydantic, ruff, mypy, Prometheus                            |
| AI & ML                  | Gemini and Claude APIs, LLM evals, scikit-learn, SHAP                          |

### EDUCATION

**MSc, Data Analysis, Process Improvement & Decision Support Engineering** — Universitat Politècnica de València (UPV) 2024 –2025

**BSc, Biomedical Engineering (ICT specialisation)** — Universitat Politècnica de València (UPV) 2020 –2024  
Thesis graded 10/10 · distinction for academic performance (top 25%)

### LANGUAGES

Spanish (native) · English (C1, Cambridge, 194)
